

FloDee Menus Manual

Every menu in FloDee for Linux

Right-click the Floater Dot to open FloDee's menu. The entries below appear in this order unless you have reorganized the menu in Settings > Menus. Entries for things this desktop cannot do (for example window-management items where the window manager will not list windows, or capture where the screen cannot be read) are hidden.

The Floater menu

Entry	What is in it
 Add Panel	Add User Apps, Add Files panel, Add Notepad Panel, Add Clipboard History, Add OBS Control, Add Volume Mixer, Add Chat Channel, Add Who's Online Panel,  Add Widgets Panel, Add Open Apps; Quick Panels Save / Load; Quick Apps Save / Load;  Panel Loader.
 Panel Loader	All Apps; Images, Videos, Documents, Audio, Archives (each: Entire Home Folder (Recursive)..., Choose a Folder (Recursive)..., Choose a Folder (This Folder Only)...); Wildcards / Regex...
 Workspaces	Your saved workspaces;  Save Current...; ⚙ Manage Workspaces...
 Panel Layouts	Save Panel Layout...; each saved layout: Restore, Delete.
 Snapshots	? About Snapshots; Take Snapshot...; each snapshot: Restore, Delete.
 Deskspaces	Your deskspaces;  Add Deskspace...;  Remove Deskspace...;  Open Deskspaces Folder.
Unhide Hidden Panels	Every hidden panel, to bring back.
 Capture Region	Exclude FloDee / Include FloDee; ⌚ Start Timer; options for what happens after a capture.
 Record Region (GIF)	Exclude / Include FloDee; ⌚ Start Timer;  Record Mouse Pointer.
 Record Video	Exclude / Include FloDee; ⌚ Start Timer;  Record Mouse Pointer;  Upload to YouTube...;  Open in Vid Editor.
 Webcam (Photo / Video)	Open Webcam;  Take Photo Now; ● Record Video Now (shown when a camera was connected at start-up).
 Capture Text (OCR)	Capture Text Now; ⌚ Start Timer.
 Lock Open /  Dormant Floater /  Anchor Panels	On/off switches.

 Saved Home Positions	Your homes (● marks the last used); Save current as...; Rename...; Remove...
 Home Positions	Every panel back to its start-up size and place.
 Window Layout	Tile Windows Stacked; Tile Windows Side by Side; Grid Layout (Span All Monitors, Auto Best Fit, 2–4 × 1–4); Cascade Windows; Minimize All Windows; Restore All Windows; 🔔 Dismiss All Flashing; Force Close All Windows (Possible Data Loss).
 Terminal	Open Terminal (in your home folder).
 Power	 Restart PC;  Shut Down PC;  Sleep;  Hibernate. These act immediately; your desktop may ask for your password.
 Tools	 MixSaviour — Mixer Profiles;  Command Palette;  Color Picker;  Add Magnifier Panel;  Add Input Visualizer Panel;  Grep;  Programmer's Calculator;  Unit Converter;  Audio Device Switcher;  Port / Process Peek;  Whols Lookup;  Text Snippets...;  File Shelf;  Screen Ruler;  Snap Window to Zone;  Snap Zone Layout.
Settings	Open the Settings window.
Exit	Close FloDee; your layout is saved automatically.

Panel menus

Where	Entries
Magnifier (right-click the view or title bar)	Smooth Scaling, Reset Zoom, Center on Cursor,  Copy Color Here.
Input Visualizer (title bar)	Show Mouse, Show Keyboard, Reset Zoom, opacity.
Chat Channel (title bar)	Clear This Conversation, Add Address Book Entry...
Chat Channel (a chat line)	Copy, Select All, Copy whole conversation.
Who's Online (a contact)	Edit Name..., Delete Peer. A nearby FloDee: Add to Contacts.
Widgets (title bar)	 Choose Widgets... (which show, graph hover delay, network adapter), Widget Size.
Widgets (bandwidth widget)	Customize Receive / Send Color..., Vertical Bars, Show Live KB/s, Auto Scale, Fixed 1 MB/s Scale, Manual Scale...
OBS Control (title bar)	OBS Connection Settings..., Reconnect Now, Auto-Connect to OBS, Show Live Preview, After Recording, YouTube Stream Key..., OBS Snapshots.
Notepad (the text)	Clear All Text.

Organizing the menu

Settings › Menus rearranges the Floater menu. Order by: Default (as built), Custom (your own order), Most Used, Most Recent, Alphabetical, or Categorized (grouped under headings). Untick an entry to hide it; select one and use ▲ / ▼ to move it, ◀ to pull it out of its submenu, or ▶ to push it into the submenu above it. ↶ Reset to Default puts everything back.

Menu Presets save a whole arrangement under a name; Export... and Import... share it as a file. A preset made on the Windows edition of FloDee works here too — entries that do not exist on Linux are simply ignored.

Settings › Panels › Alternate Submenu Sides makes every submenu level open on the opposite side from the one before, so nested menus stack instead of marching across the screen. It is off by default.

 Snapshots › Restore closes any open window that is not in the snapshot. Save your work first.

⏻ Power entries act immediately, without a second question.
